PNH by FLAER

Specimen	Peripheral Blood
Instrument software	BD FACS LYRIC/BD FACS SUITE
Gating strategy	FLAER based PNH assay
Cell preparation method	Stain - Lyse - Wash
Total granulocyte events acquired	50826
Total monocyte events acquired	1285
PNH - Limit Of Detection (LOD)	0.0393 %
PNH - Limit Of Quantification (LOQ)	0.0984 %

Granulocytes: No evidence of decreased or absent expression of FLAER or CD157.

Monocytes: No evidence of decreased or absent expression of FLAER or CD157.

IMPRESSION: Flow cytometry analysis does not show evidence of paroxysmal nocturnal hemoglobinuria

Note - For calculation of limit of detection (LOD) a threshold of 20 neutrophilic events is used and for calculation of limit of quantification (LOQ) a threshold of 50 neutrophilic events is used.

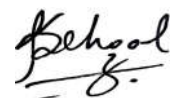

Panel used was FLAER/CD157/CD15/CD64/CD45 as per 2018 international PNH guidelines.
