## **EVICOSCREEN - EVIDENCE BASED COMPREHENSIVE PRENATAL SCREENING REPORT**

Patient Name: Mrs. PRIYANKA DEVI

Sample Type:Serum

Method: Electrochemiluminescence (Roche)

Patient DOB: 07/09/2006

Collection Date: 18/08/2024

**EVIC** Screen is an evidence based prenatal screening program curated by Lilac Insights in accordance with the Fetal Medicine Foundation (UK) guidelines for First Trimester Screening to determine the probality of most common chromosomal aneuploidies in a pregnancy. It utilizes:

- Hormonal values from the pregnancy measured on Fetal Medicine foundation (UK) accredited analyzers and reagents
- Robust indigenous medians from over 7 lac+ pregnancies for different gestation ages
- Risk calculations from evidence based algorithms validated through large international studies

## UKNEQAS: United Kingdom National External Quality Assessment Service

The Risk Assessment Performed Using
CE-Marked Antenatal Risk Evaluation Software
Certified by the British Standards Institute
(BSI)- ISO 13485:2016

Test Name	Result.	Units
Free-ß-hCG	40.20	ng/mL
PAPP-A	38283.00	mIU/L

## Note

- 1. Values mentioned above are observed values for PAPP-A & Free ß-hCG in the pregnancy on the day of sample collection. These values should not be interpreted in isolation and need to be necessarily incorporated in a validated prenatal Aneuploidy risk calculation software, along with ultrasound and biophysical parameters to calculate the patients individualised risk for aneuploidies like T21, T18, T13 and interpreted accordingly.
- 2. Biochemical analysis have been performed in accordance to the Fetal Medicine Foundation (FMF) UK guidelines. External QC performed by United Kingdom National External Quality Assessment Service (UKNEQAS). We will appreciate you providing us the outcomes
- 3. Divide the values for PAPP-A by 1000 for ASTRAIA Software.
